**Transport & Energy**

Globally, air pollution causes 4.2 million premature deaths each year.

Over 90% of the EU’s urban population is exposed to high concentrations of air pollutants.

Energy poverty affects 40% of the Spanish population and it causes more than 7,000 premature deaths every year.

25% of CO2 emissions in Spain are linked to transport.

Each driver in Barcelona, the most congested city in Spain, spends 6 days a year stuck in the car with a congestion rate of 29%. This rate is as high as 65% in Mumbai.

The fossil fuel extraction technique known as fracking uses up to 200 chemicals including toxic and carcinogenic ones. Many European countries have banned the technique on their soil. Why is it allowed outside?

Lithium extraction for electric car batteries generates labour exploitation, environmental degradation and conflicts.

**What’s the progress?**

- European regulations on air quality
- European Green Deal

**Judge: Analyse the facts**

Accept scientific consensus. Green Decalogue

The need to prioritise public transport in cities. Laudato Si’ 153

**Act: Encourage yourself to walk, to bike, to use public transport and to transform**

Share your car journeys.
Compensate the CO2 of your travels supporting clean energy projects.
Connect your finances with ethical banking and environment.
Think about switching to another electric company supporting a new energetic model.
Think about whether you actually need what you can quickly buy online.
Help us to promote a Due Diligence Act in Spain.

There are many more proposals. Visit www.enlazateporlajusticia.org/en and look for the document TRANSPORT AND ENERGY.
